

Session: Nutrient mining and input output balances

Potassium Dynamics in Soil under different Cropping Systems and Nutrient Management Practices

Ingrid Öborn

Swedish University of Agricultural Sciences
(SLU), Uppsala, Sweden

ingrid.oborn@vpe.slu.se

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

Content

- ✓ Introduction
- ✓ Input-output K balances – different approaches, what do they tell?
- ✓ 'Nutrient mining' – how to assess soil K weathering rates and potential?
- ✓ Results from research combining (i) simulation modelling, (ii) long-term field experiments, (iii) qualitative and quantitative characterization of K sources and sinks, and (iv) GIS based maps
- ✓ Conclusions and challenges ahead

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

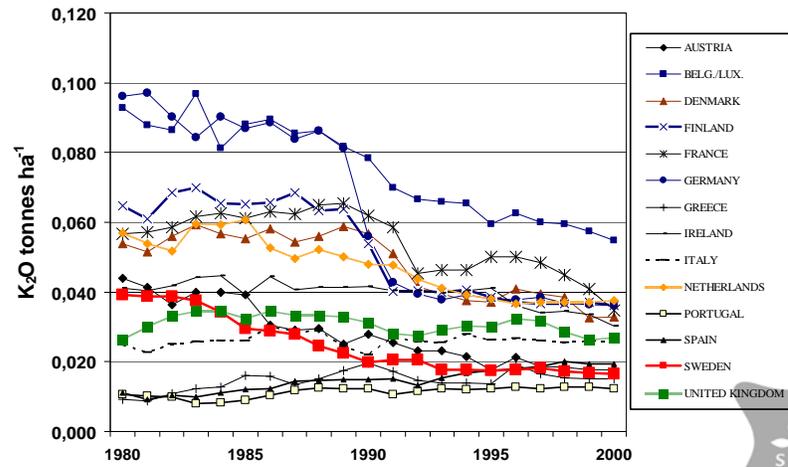

Introduction - Why research on K?

- Strong focus on N and P
- Decrease in K fertiliser application in many European countries (see Fig).
- Negative K balances have been reported at farm and field level, especially in grass dominated low input systems (e.g. organic systems).
- Delivery of K from soil mineral sources can be of crucial importance for the long-term sustainability – how to assess?.
- There are areas where there will be a need for K-supplementation – but where?
- **Project: “K-dynamics in agricultural soils—quantifying K sinks and sources including mineral weathering and identifying soils (areas) in need of K-supplementation”**
-

‘Nutrient mining’ – how to assess soil K weathering rates and potential?

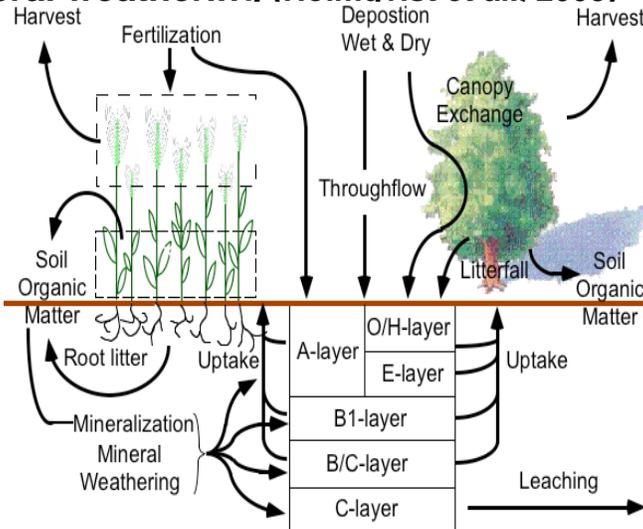

(i) Simulation modelling to predict weathering rates

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

Application of the biogeochemical steady-state model PROFILE to estimate K release from mineral weathering (Holmqvist et al., 2003)

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

Estimated K release (steady-state) from mineral weathering using the PROFILE model
 0-40 cm soil depth, soil temp. 2-10°C (Holmqvist et al., 2003)

- Sand and sandy till
 $3-5 \text{ kg K ha}^{-1}\text{yr}^{-1}$
- Silt loam
 $10-20 \text{ kg K ha}^{-1}\text{yr}^{-1}$
- Clay (illitic)
 $50-80 \text{ kg K ha}^{-1}\text{yr}^{-1}$

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

The influence of temperature and moisture on K weathering rates

Soil moisture had a great influence:

Field capacity → Wilting point

Sa: 4-5 kgK/ha yr → 1-2 kgK/ha yr

Silt: 20 kgK/ha yr → 7-8 kgK/ha yr

Clay: 90 kgK/ha yr → 58 kgK/ha yr

The weathering rate increased 5-10% at an average temperature increase on 1°C (interval 2-10°C)

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

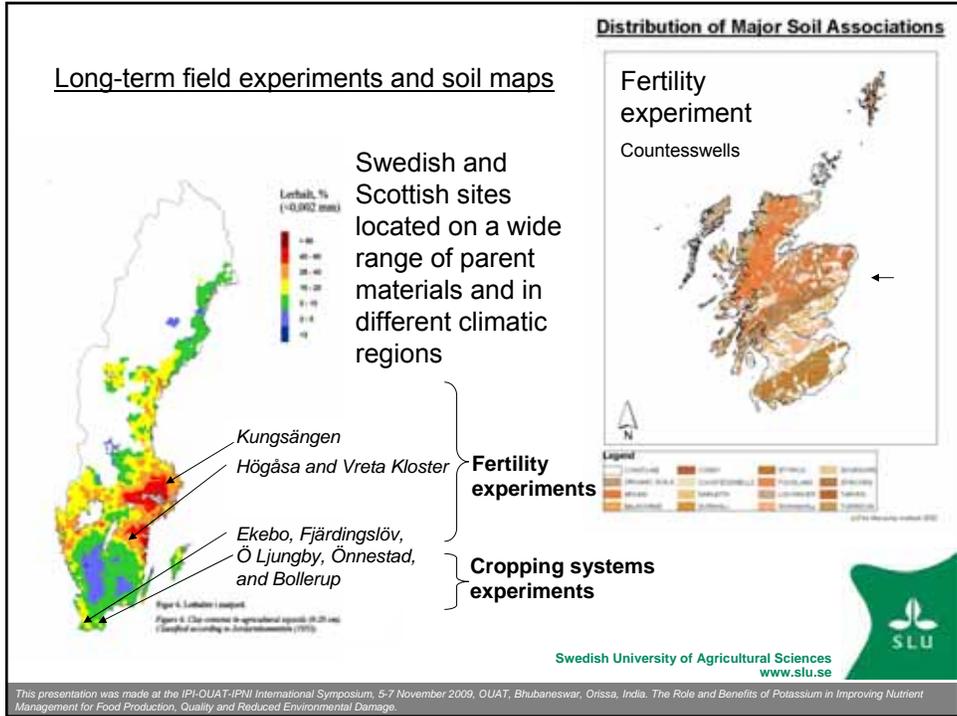

'Nutrient mining' – how to assess soil K weathering rates and potential?

(ii) Long-term field experiments, historical data and re-sampling

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

Experimental design, site and soil data

30 year field experiment

Rotations

Grass I perennial rye grass (*Lolium perenne*, L.) 11 yrs, 2 cuts yr⁻¹

Cereals 2 + 7 years (NPK fertilisers)

Grass II perennial rye grass
10 yrs, 3 cuts yr⁻¹

Treatments Grass I, Grass II

K0, K65 kg ha⁻¹ yr⁻¹

N and P fertiliser added annually

Design

Randomized block design,
5 replicates

Parent material

Glacial till derived from granitic bedrock

Climate

Annual average 7.9°C, 791 mm

Soil type

Countesswells association, Dess series
(freely draining iron humus podzol)

Dystric Cambisol (FAO)

Typic Fragiorthod (USDA)

Soil characteristics

org C Ap 5.1%, Bs 1.5%

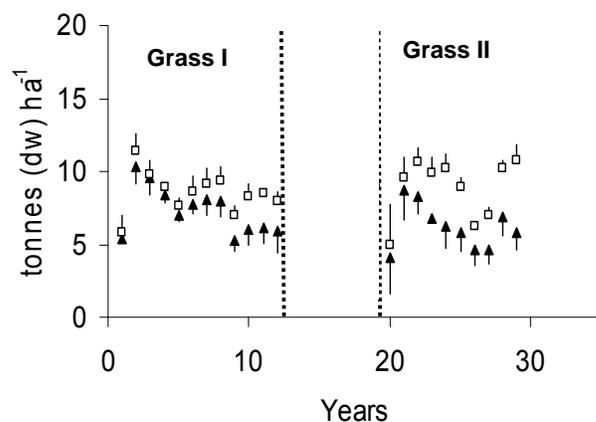

clay 1-4% silt 17-22% sand 75-82%

pH_{CaCl2} 4.9-5.2

This presentation was made at the IPI-OJAT-IPNI International Symposium, 5-7 November 2009, OJAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

Annual biomass harvest

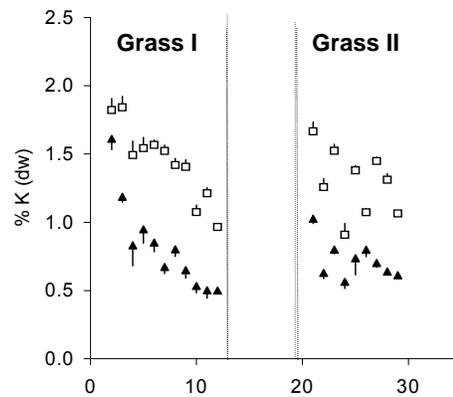

□ 65 kg K; ♦ 0 K

This presentation was made at the IPI-OJAT-IPNI International Symposium, 5-7 November 2009, OJAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

Mean annual K conc (%) in grass

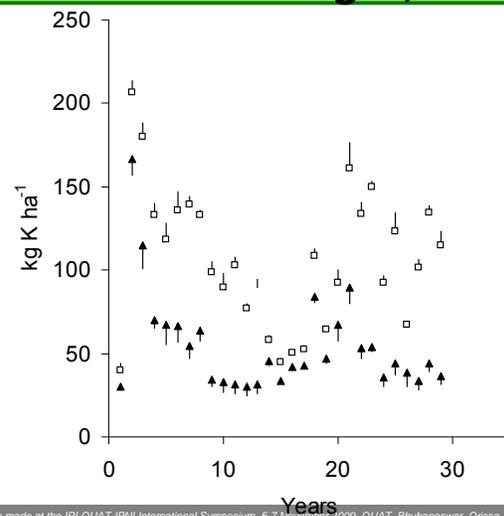

□ 65 kg K; ♦ 0 K

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

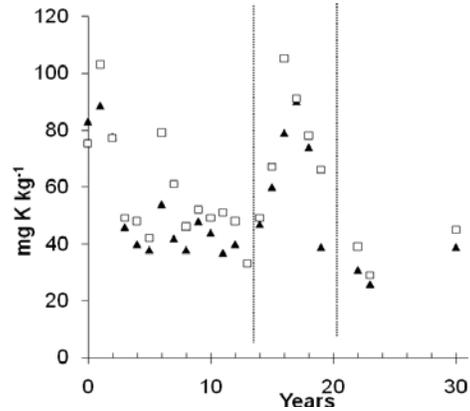

Mean annual K-off take in biomass harvest (kg K ha⁻¹ yr⁻¹) in grass

□ 65 kg K; ♦ 0 K

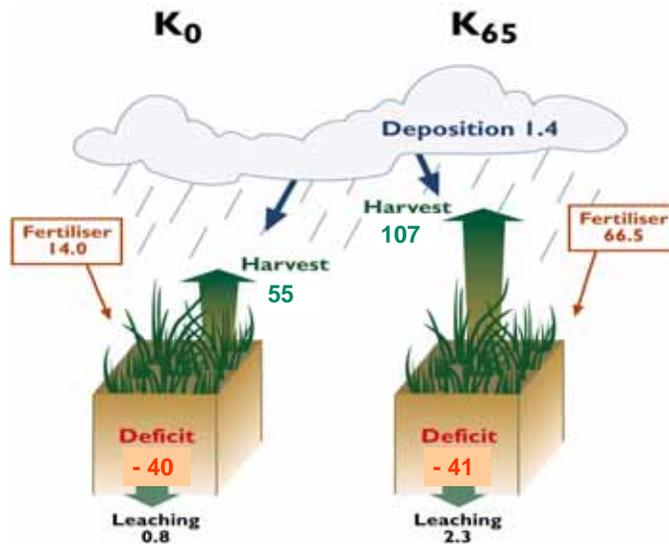

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

**Exchangeable K (acetic acid extractable)
0-15 cm; □ 65 kg K; ♦ 0 K**

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

**Average K mass balances for a 30 year period,
kg ha⁻¹ yr⁻¹**

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

Examples of soil pools of K Ap horizon (0- 25 cm), kg ha⁻¹

| Soil type (FAO) | Tot-K | Aq reg K | 2M HCl K | Ex-K |
|--|---------------|---------------|----------|-----------|
| Loamy sand Dystric Cambisol | 43 100 | 12 800 | - | 80 |
| Loamy sand Eutric Regosol | 65 500 | - | 2 500 | 100 |
| Silt loam Thionic Gleysol | 66 000 | - | 6 800 | 220 |
| Clay(illitic) Eutric Cambisol | 84 700 | - | 13 300 | 510 |

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

How does the K release rate relate to other soils under similar systems and climate?

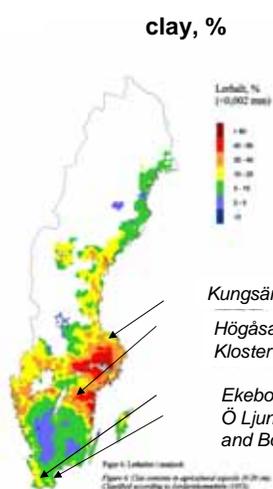

- Loamy sand (Hög) 8±10 kg ha⁻¹yr⁻¹,
- Silty clay (Vre) 40± 8 kg ha⁻¹yr⁻¹
- Clay (Kun) 45±10 kg ha⁻¹yr⁻¹
- Loam (Eke) 51±12 kg ha⁻¹yr⁻¹
- Sandy loam (Fjä) 65 ± 7 kg ha⁻¹yr⁻¹

0 PK, N fertiliser added, manure added (20-28 kg K ha⁻¹ yr⁻¹) (40 years; Simonsson et al., 2007)

- Loamy sand, Countesswells, 38 ha⁻¹yr⁻¹
(Öborn et al, under publication)

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

Concentrations of exchangeable K (K_{ex}) in the soil profiles (0-110 cm) ($n = 2$).

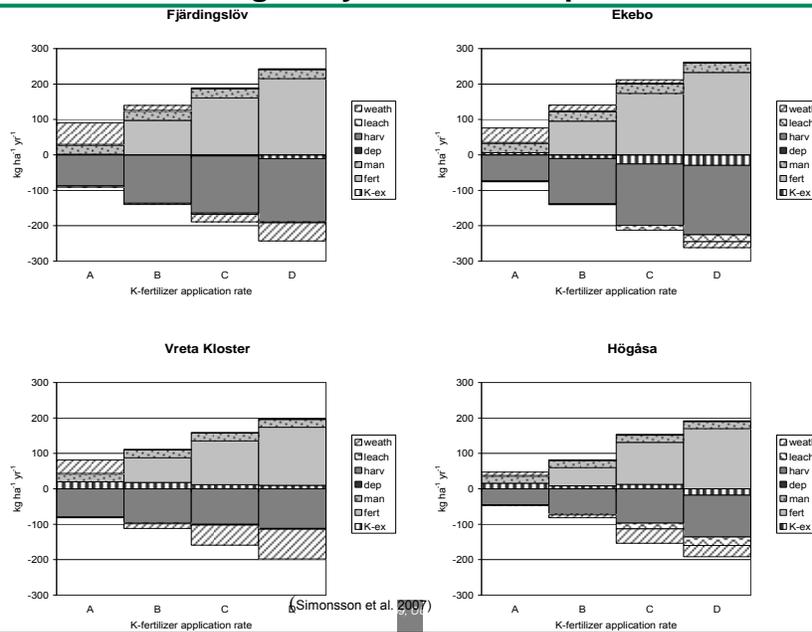

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

Schematic visualization of sources and sinks (kg ha^{-1}) of K in field balance for (A) low K input (only manure), and (D) excess K fertiliser (Simonsson et al. 2007)

This presentation was made at the IPI-OUAT-IPNI International Symposium, 5-7 November 2009, OUAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

Average sources (positive) and sinks (negative) of K, over 4–6 rotations during ~40 years of the experiments

'Nutrient mining' – how to assess soil K weathering rates and potential?

(iii) Soil pools of K – how much K and in which form?

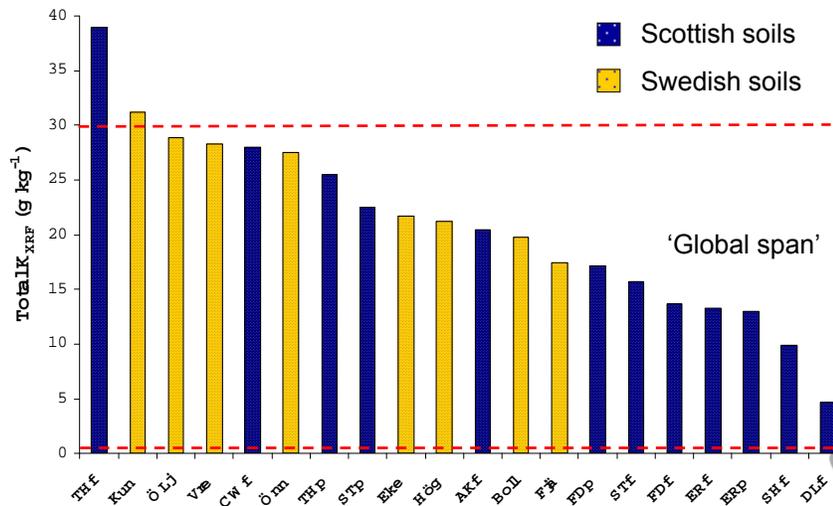

SLU

This presentation was made at the IPI-OJAT-IPNI International Symposium, 5-7 November 2009, OJAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

YAR2

RESULTS

Total K g kg^{-1} (XRF) in surface soil (Ap-horizons)

(Andrist Rangel, 2008)

SLU

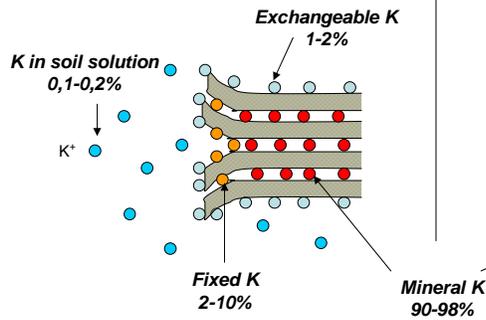

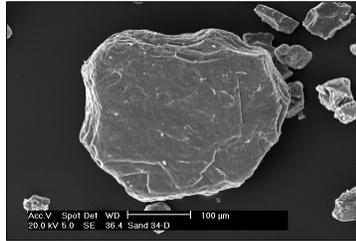

This presentation was made at the IPI-OJAT-IPNI International Symposium, 5-7 November 2009, OJAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

Slide 34

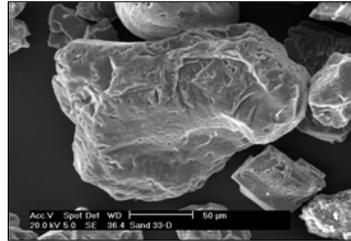

YAR2 based on suggested quantitative mineralogical analysis and normative calculation. using the same set of mineral formulae for all soils, a mineralogical budgeting approach wasnext slide...where the speciation of total K could be revealed. , something that is important to be able to estimate the potential K delivery capacity of the soils.

Andrist Rangel, 8/23/2008

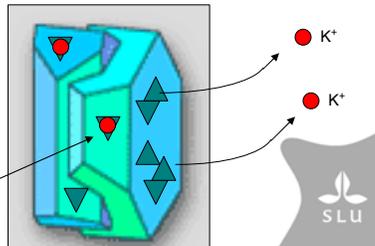

Micas and clay minerals

K feldspars

Release of K from "etch pits" (crystal defects) during weathering

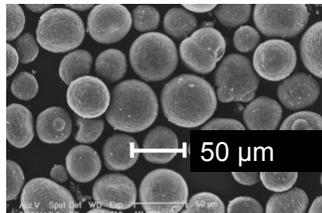

This presentation was made at the IPI-OJAT-IPNI International Symposium, 5-7 November 2009, OJAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

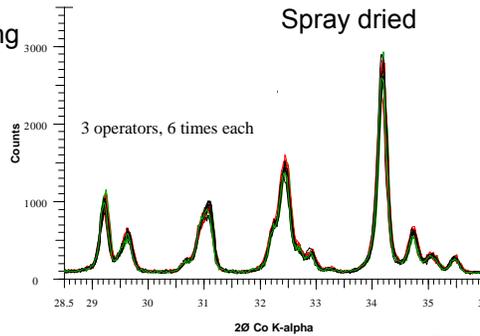

Quantitative mineralogical analysis X-ray powder diffraction (XRPD)- random orientation

Spray drying

Sample preparation crucial!

(Hillier, 1999;2003)

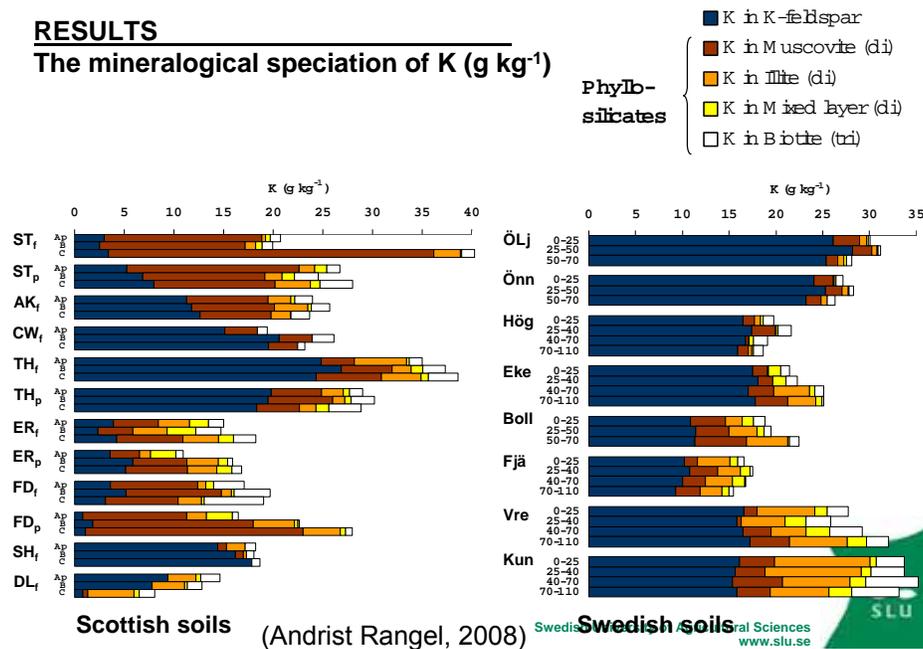

Swedish University of Agricultural Sciences
www.slu.se

This presentation was made at the IPI-OJAT-IPNI International Symposium, 5-7 November 2009, OJAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

RESULTS

The mineralogical speciation of K (g kg⁻¹)

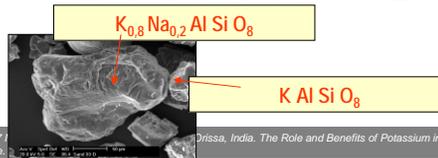

Conclusions

- ✓ In a K deficient grass system the total net K off-take (30 yrs) was 1100 kg K ha⁻¹ (38 kg ha⁻¹ yr⁻¹) being released from non-exchangeable sources.
- ✓ The Ex-K pool in the rooting zone (0-40 cm) was ~100 kg ha, i.e. Ex-K is a dynamic pool that has been replenished 10 times during the experimental period.
- ✓ Evaluation of long-term field experiments showed K release rates in the range 8-65 kg K ha⁻¹ yr⁻¹
- ✓ Model simulations estimated a weathering of 3-80 kg K ha⁻¹ yr⁻¹ depending on e.g. soil mineralogy, soil texture, climate.

Conclusions cont. and challenges

- ✓ There is a need to integrate site specific properties such as weathering potential in nutrient management (based on science).
- ✓ This requires quick quantitative methods (mineralogical and chemical) to characterize K sources and sinks
- ✓ Better understanding of and use of knowledge about the mechanisms and processes in the soil-plant-microb system
- ✓ Further development and testing of simulation models including weathering, e.g. in relation to particle size
- ✓ K-feldspars in agricultural soils: importance as K source for plants? How can we increase the utilization of feldspar K?

This presentation was made at the IPI-OJAT-IPNI International Symposium, 5-7 November 2009, OJAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.

Drissa, India. The Role and Benefits of Potassium in Improving Nutrient

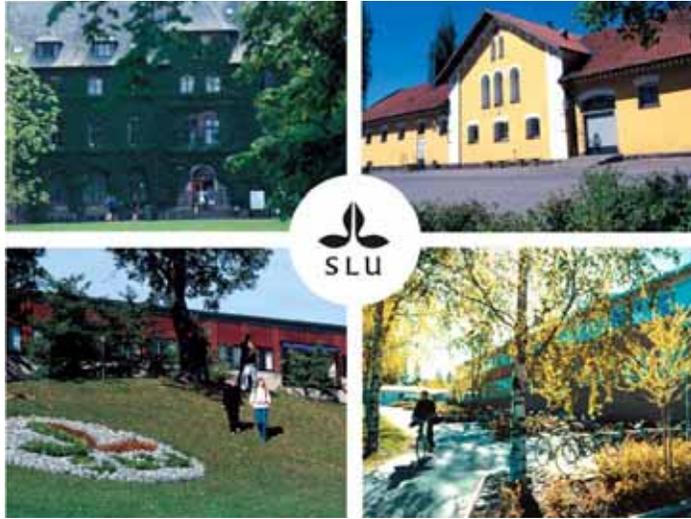

Expected outcomes

- ✓ Identification of soil types / areas and cropping systems in need of K-supplementation.
- ✓ User-friendly tables and/or GIS based maps showing the potential K-delivering capacity for different soil types (tables) and geographical areas (based on dominating soil type within an area).
- ✓ Inclusion of the potential K delivering capacity of different soils in extension/advisory, e.g. in K field balance calculations and for fertiliser recommendations

This presentation was made at the IPI-OJAT-IPNI International Symposium, 5-7 November 2009, OJAT, Bhubaneswar, Orissa, India. The Role and Benefits of Potassium in Improving Nutrient Management for Food Production, Quality and Reduced Environmental Damage.
